# HTO combined with ACL Reconstruction on valgus : Case-based

Guillaume DEMEY - David DEJOUR

Lyon Ortho Clinic, Lyon, France

LYON ~~ORTHO~~ CLINIC

2019

Woman, 31 years old Left knee

Reason for consultation: pain and instability

History: ACL tear in 2005 falling down stairs ACL reconstructed with hamstrings in 2005

Revisions with KJ in 2008

Re-revision with OTV + ACL reconstruction (contralateral KJ graft) + lateral TFL tenodesis in 2014

New work-related accident on 2019

Feeling very unstable

Height: 1.69m Weight: 101kg

Past medical history: sleeve gastrectomy 1 month ago Allergies: medication 0, tobacco 0"

# Clinical exam

Lachman Trillat soft end point

Pivotshift +

Genu valgum ++ on left side

ROM 0/0/120

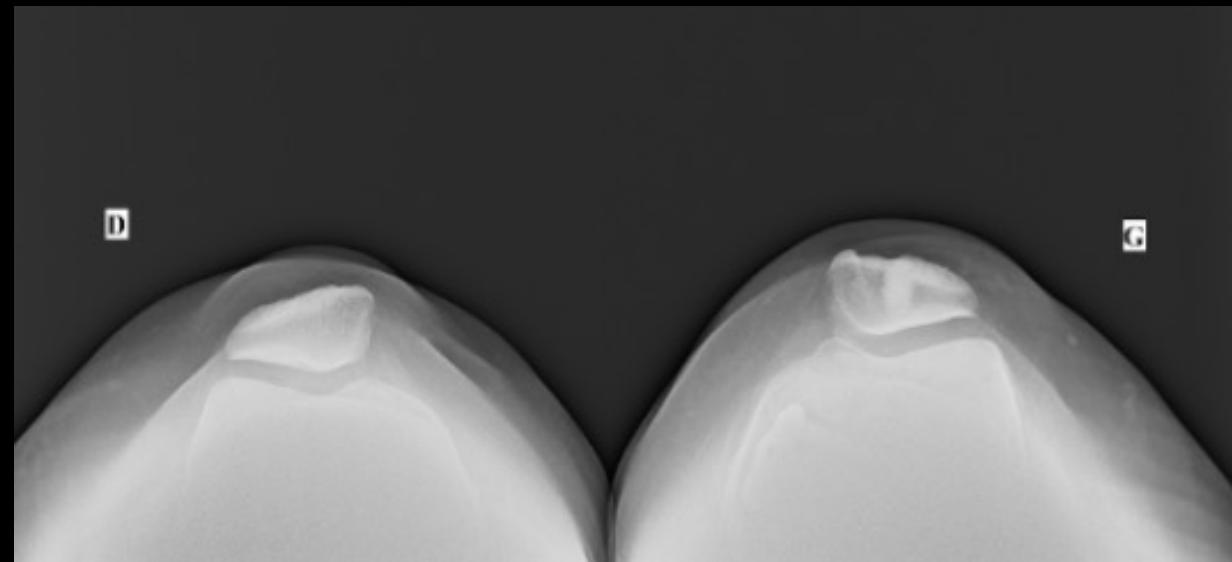

Diffuse pain

Patella : appréhension sign ++

# Posterior tibial slope

**RLCA → TAUX DE RE-RUPTURE : 17-25%**

## Facteurs de Risque de rerupture

- Malposition des tunnels
- Laxité post-opératoire
- Sport pivot-contact
- Age jeune

Meta-Analysis > Arthroscopy. 2023 May;39(5):1299-1309.e6.  
doi: 10.1016/j.arthro.2022.12.034. Epub 2023 Jan 21.

**Elevated Posterior Tibial Slope Is Associated With Anterior Cruciate Ligament Reconstruction Failures: A Systematic Review and Meta-analysis**
