

VARUS KNEE:

How to deal with medial meniscal tear WITHOUT OA

Nicolas Pujol, MD
Centre Hospitalier de Versailles
npujol@ght78sud.fr

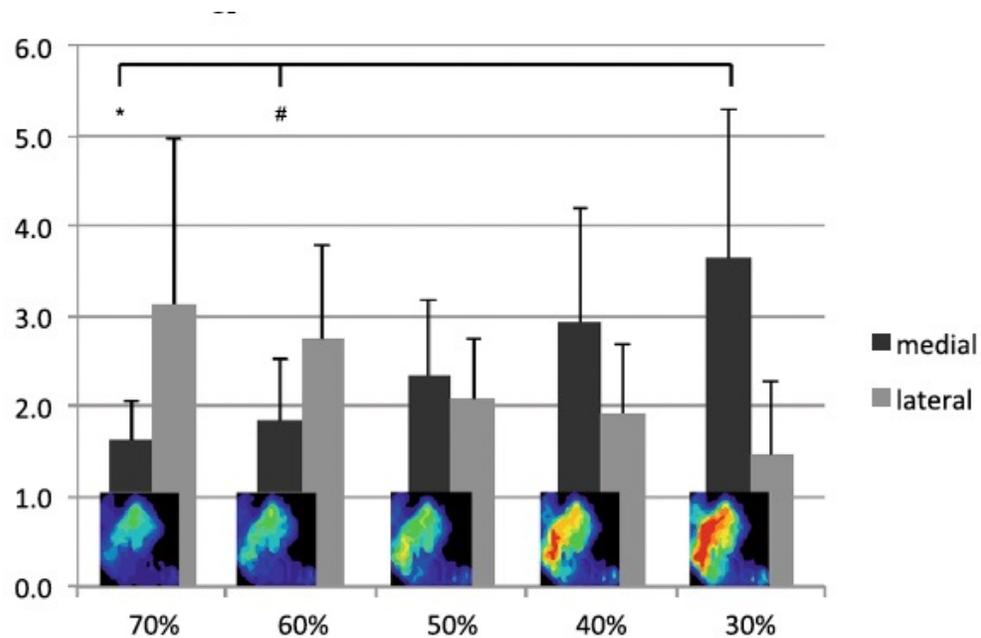

FRANCE

DOES VARUS MATTER? ... Biomechanics

Medial Contact pressure increased in varus knees

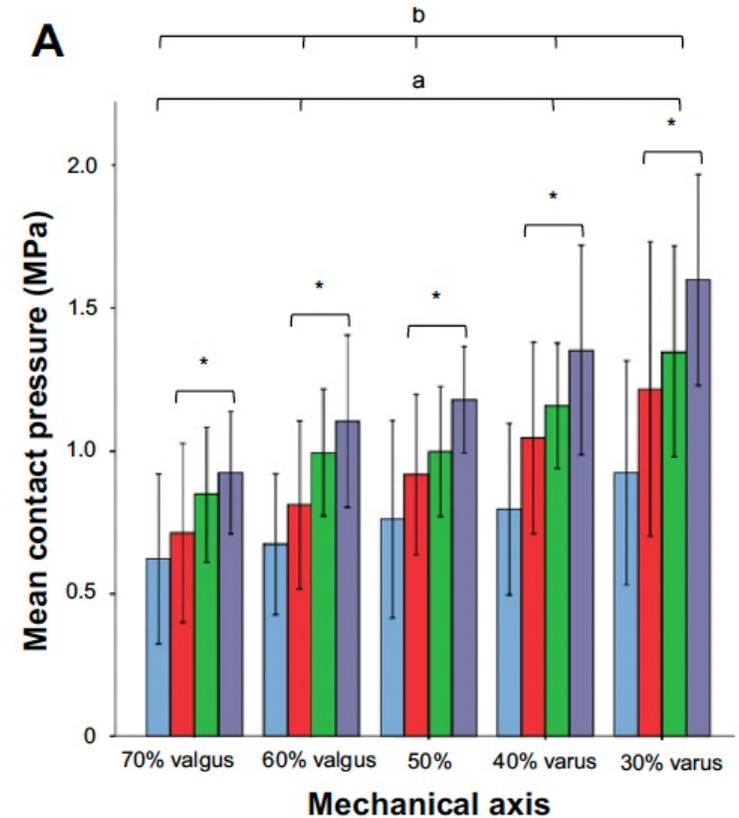

AND

Significantly increased after meniscectomy

Varus alignment increases medial meniscus extrusion and peak contact pressure: a biomechanical study

Lukas Willinger¹ · Jan J. Lang^{2,3,4} · Constantin von Deimling^{2,6} · Theresa Diermeier¹ · Wolf Petersen⁵ · Andreas B. Imhoff¹ · Rainer Burgkart² · Andrea Achtnich¹

Meniscus condition

- Intact
- 50 % resection
- 75 % resection
- meniscectomy

Knee Surgery, Sports Traumatology, Arthroscopy (2020) 28:1055–1063
<https://doi.org/10.1007/s00167-019-05654-5>

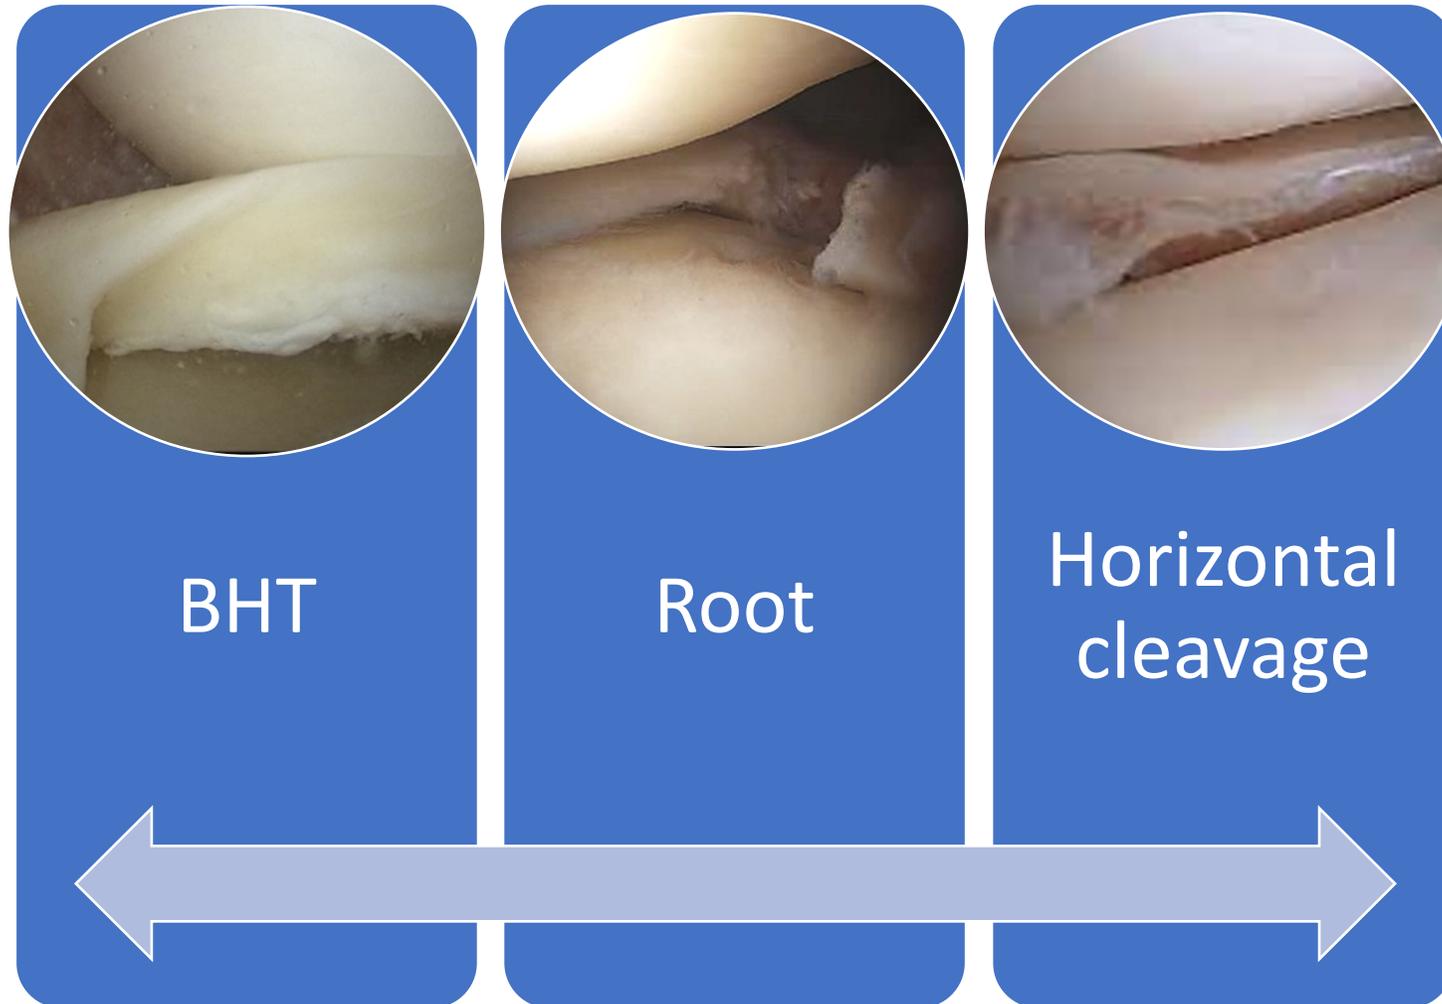

KNEE

Varus alignment aggravates tibiofemoral contact pressure rise after sequential medial meniscus resection

Lukas Willinger¹ · Jan J. Lang^{2,3,4} · Daniel Berthold¹ · Lukas N. Muench¹ · Andrea Achtnich¹ · Philipp Forkel¹ · Andreas B. Imhoff¹ · Rainer Burgkart² · Constantin von Deimling^{2,5}

Different situations

Lot of medial meniscal tears/lesions IN A STABLE VARUS KNEE

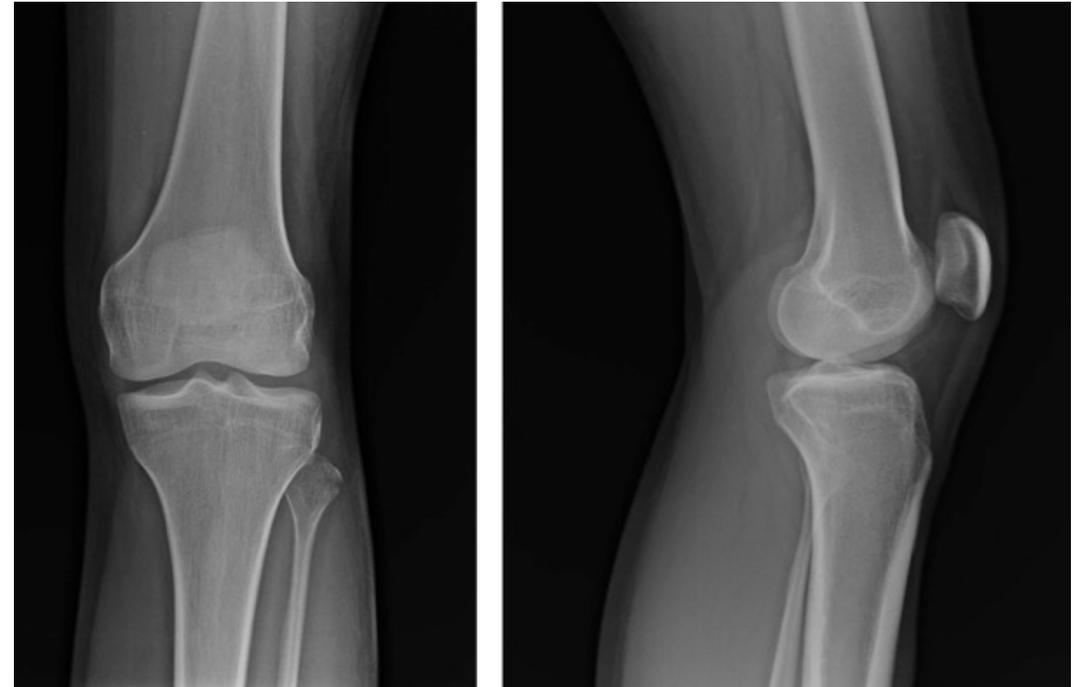

Case 1 Medial meniscus tear, stable knee, Varus

Man, 32 y

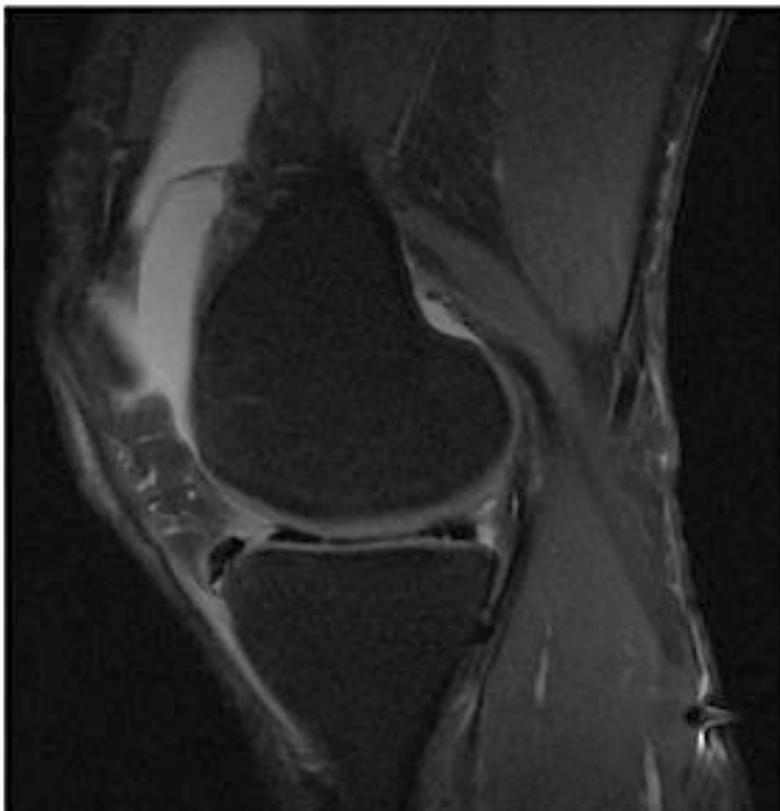

- Left Knee pain since **3 months**
- Sudden onset
- Daily pain

- **Varus ++**
- 0-0-125
- Effusion ++
- No laxity
- **Medial pain**

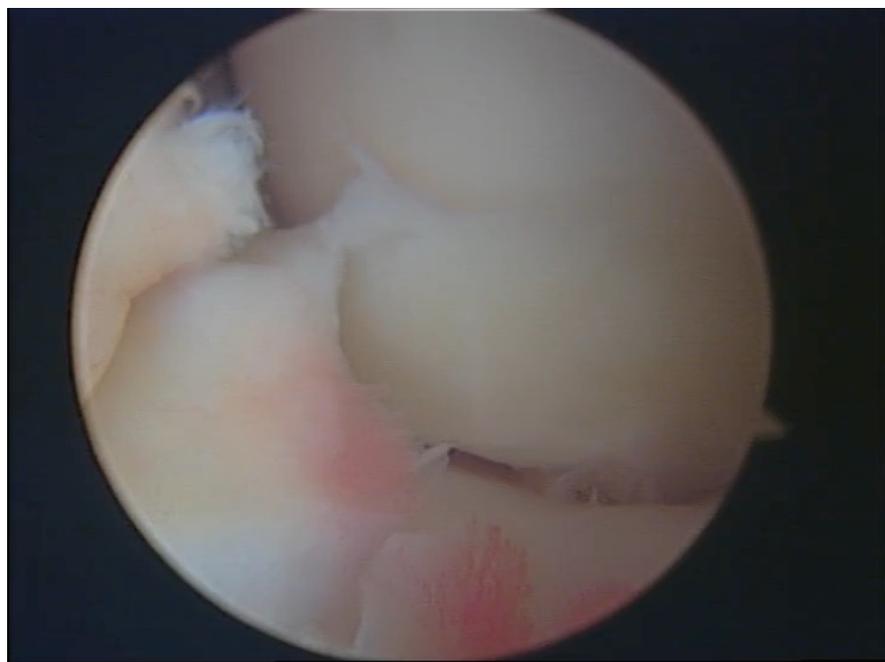

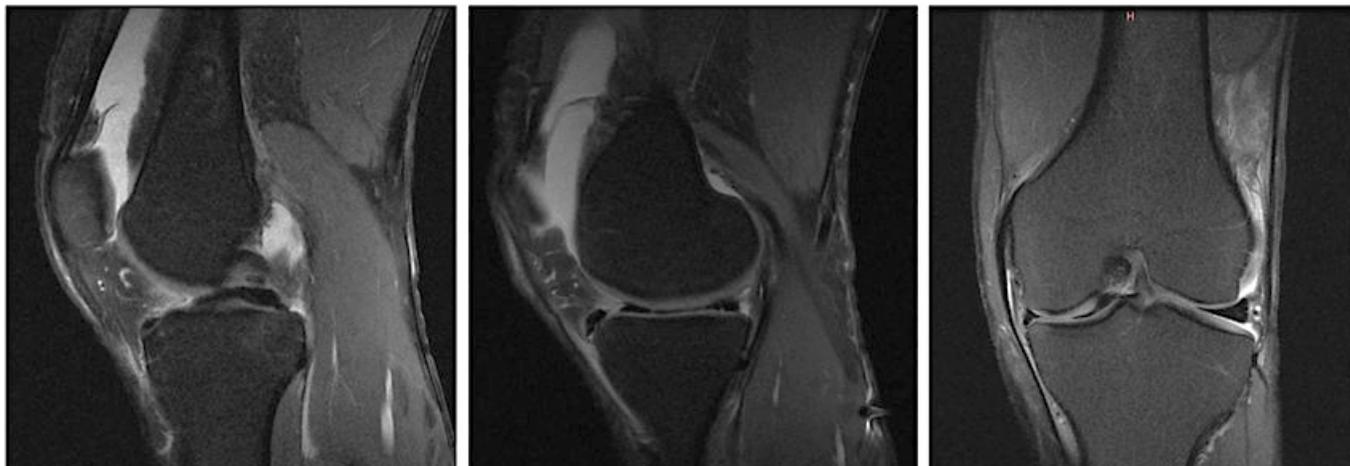

- **BMI = 22**

MRI

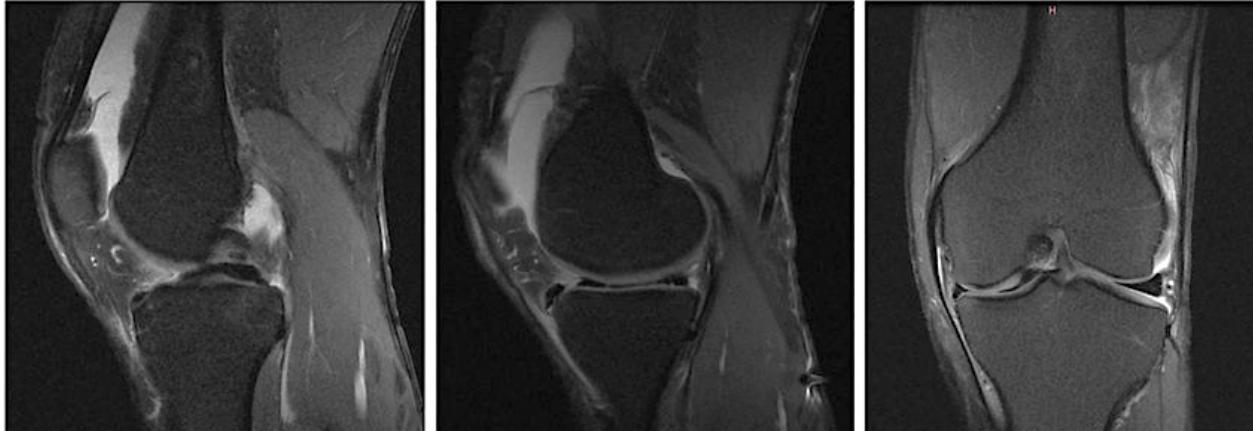

MRI/LLSXR

HKA 174

MRI/LLSXR

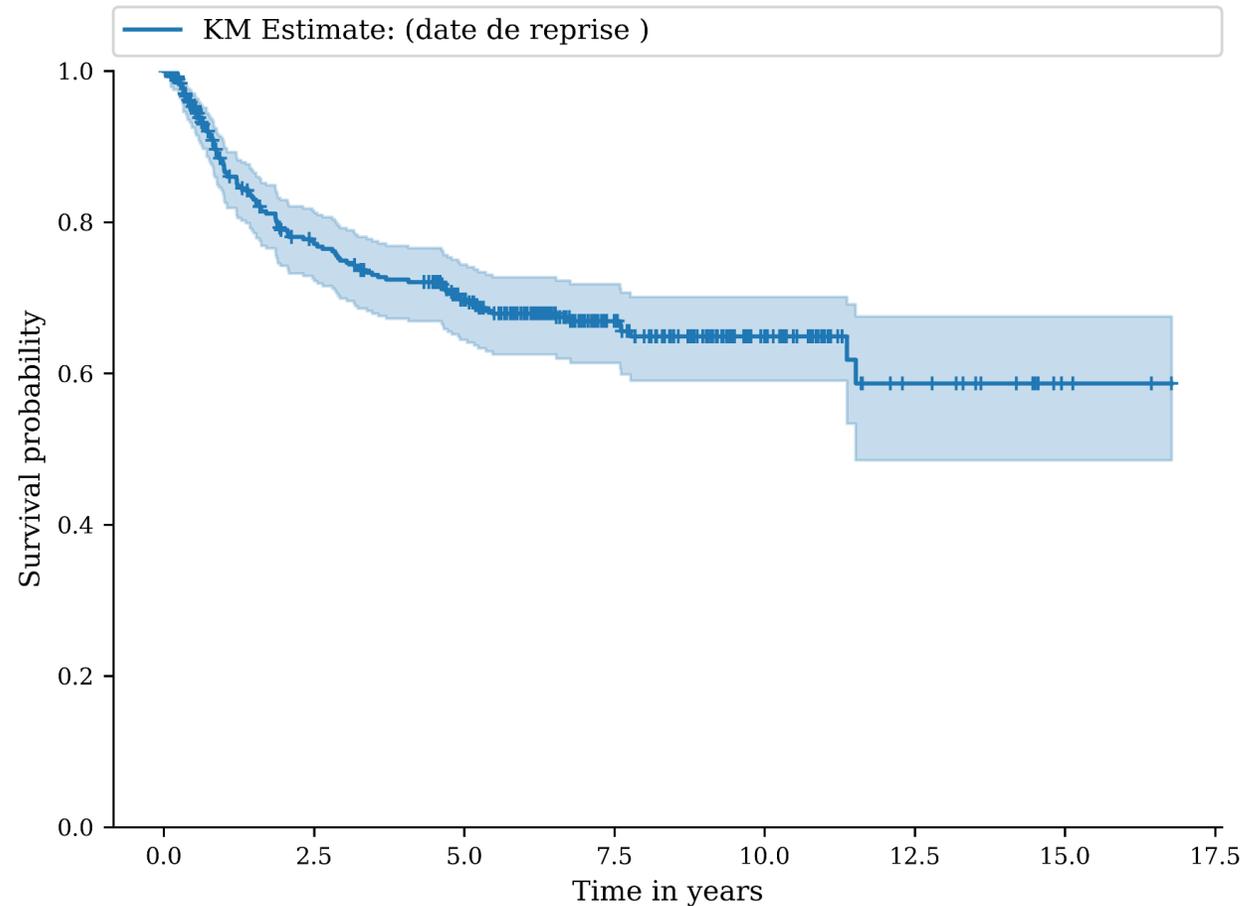

Meniscus repair, stable knee !

Medial meniscus repair on a stable knee??

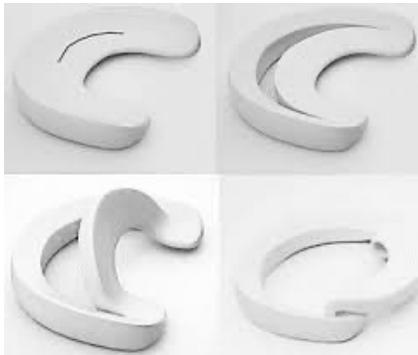

- 377 patients
- Mean FU 6,5 y (+/- 3,5)
- Risk of failure?
- Survivorship:
 - At 2 y: 79% [74,5-83]
 - At 5 y: 69,7% [64,5-74,5]
 - At 10 y: 64,9% [59,1-70,1]

Bucket handle meniscal tear and varus deformity ?

■ Varus = **Not a negative factor**

- Meniscus repair
- Stable knee

- Negative predictive factors:

Age, Tobacco, type of lesion

Variable	No N = 216	Yes N = 114	p-Value
HKA	178.94 (± 2.8)	179.91 (± 1.82)	0.093
	Range: (172.0 ; 186.0) N = 53	Range: (176.0 ; 186.0) N = 32	

Results of the multivariate analysis

	Odds Ratio	p-Value
Intercept ●	0.126 [0.00846 ; 1.89]	0.134
lésion chondrale ICRS Reference: 1 ou moins change reference 2 ou plus	0.782 [0.305 ; 2.01]	0.609
tabac	1.49 [0.826 ; 2.69]	0.185
appui	3.6 [1.62 ; 7.98]	0.0016 **
attelle	2.83 [1.54 ; 5.2]	7.76e-4 ***
BMI Risk for each 1-unit increase	1 [0.907 ; 1.11]	0.935
Anse de seau	1.71 [1.02 ; 2.89]	0.0437 *
Age at inclusion (years) Risk for each 1-unit increase	0.966 [0.939 ; 0.993]	0.0153 *
Gender Reference: M change reference W	1.39 [0.763 ; 2.53]	0.282

* p<0.05 ** p<0.01 *** p<0.001 **** p<0.0001

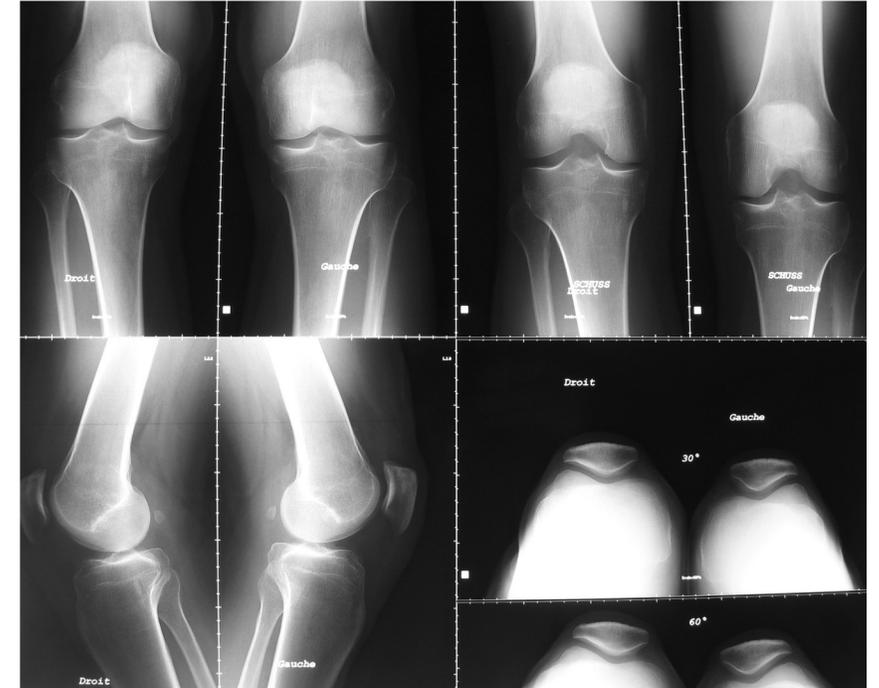

Case 2 medial Root tear, Varus knee

Man, 54

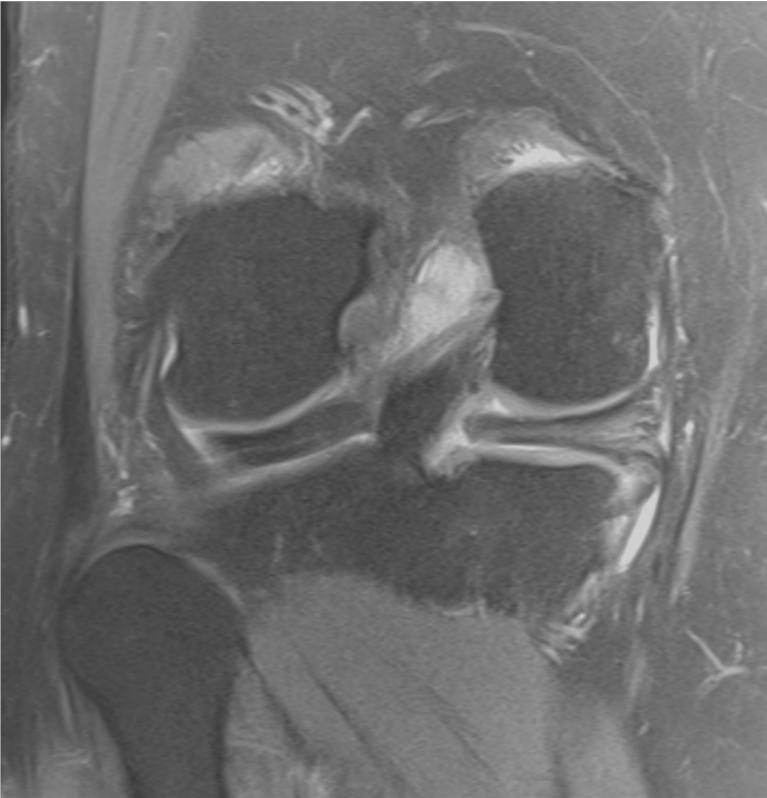

- Leftg Knee pain since **4 years**
- Sudden onset
- Daily pain
- Medical treatment (injections and physio) : failure

- **Varus ++**
- 0-0-125
- Effusion ++
- No laxity
- **Medial pain**

- **BMI = 28**

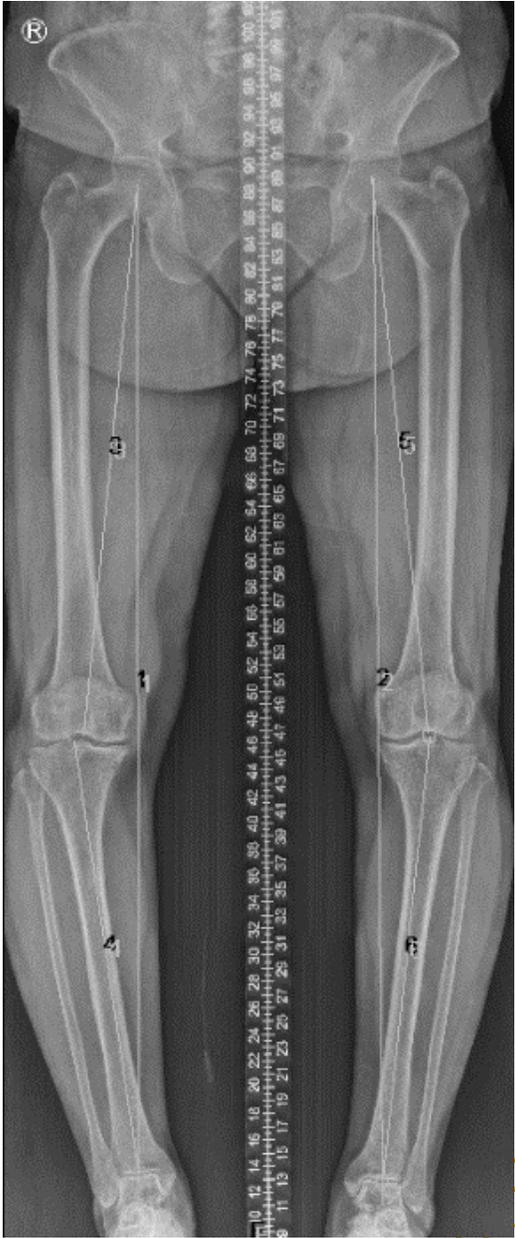

MRI

Extrusion = **2.5 mm**

HKA

Right: **169°**
Left: **171°**

Root tear and varus ?

- Varus > 5° = **Negative predictive factor**¹
 - Osteotomy + repair = **good results if no advanced OA**²

Remodified Mason–Allen suture technique concomitant with high tibial osteotomy for medial meniscus posterior root tears improved the healing of the repaired root and suppressed osteoarthritis progression

Young Mo Kim ¹, Yong Bum Joo ², Woo Yong Lee ¹, Yun Ki Kim ¹

17 patients at 5 y

MME 3mm ±0,7

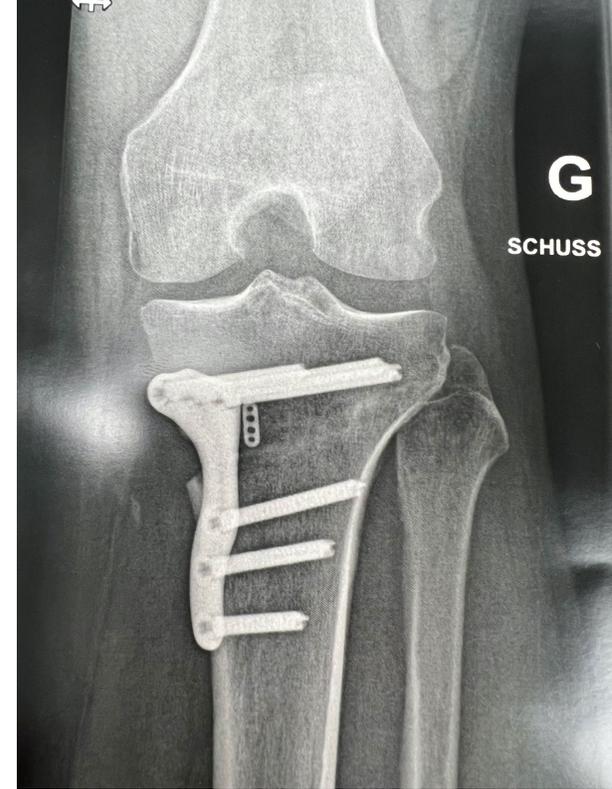

BMI < 30

KL ≤ 2

Varus 6° ±1,8

- Osteotomy with Vs without root repair ³⁻⁶
 - Comparatives studies
 - **No significant difference**

Chronic Lesions
KL 3-4

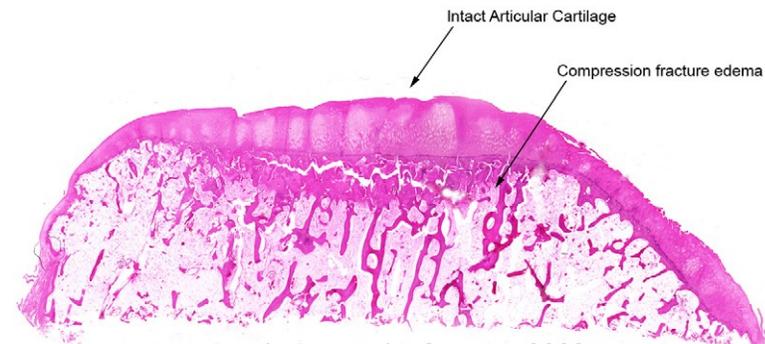

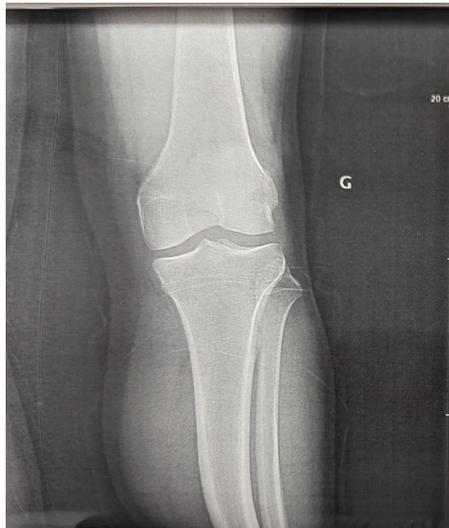

- 1.Jiang. The knee. 2019
- 2.Kim YM. KSSTA 2020
- 3.Takahashi. J Orthop Sci. 2020
- 4.Le OS. Knee 2018
- 5.Ke. KSSTA 2020
- 6.Le DW. Arthroscopy 2020

Root tear without OA: high risk of:

- AVN of the femoral condyle
- Subchondral Fracture
- Rapid chondrolysis

➤ Early treatment if possible

Case 3

Woman, 59

- Right Knee pain since **2 months**
- Sudden onset
- Moderate pain

- **Varus ++**
- 0-0-130
- Effusion +
- No laxity
- **Medial pain**

- **BMI = 25**

No OA
